Lloyd's submerged life to help teach kids

Underwater world

Lisa Tisdell

MARINE educator Lloyd Godson has pedalled a submarine through the Greek Islands, lived in an underwater steel structure and spent a fortnight under the surface of a German aquarium.

Newman Senior Technical College students will have a hands-on role in Mr Godson's next adventure as they help prepare an underwater habitat for him to call home.

The underwater adventurer needs community support to make the project a reality.

Mr Godson, who recently moved to Port Macquarie, has raised about \$13,500 on his quest to reach at least \$33,000, or as much as the \$60,000 ultimate goal, to fund the project in the next 20 days.

He plans to build an underwater headquarters, a Danish-designed futuristic sphere made of steel hexagons, in which he will live in the ocean.

Newman Senior Technical College students will be involved in the design and construction, and follow the underwater adventure on the internet.
